

HK KNIVES ANNOUNCES

THE INCURSION®

OUT THE FRONT AUTOMATIC

Henderson, NV – HK Knives® has added the full size Incursion® out the front automatic to expand their line of utility driven knives. The Incursion offers an additional inch of blade length over the popular Mini Incursion to supplement more demanding cutting endeavors. The frame also supplies an extra 1.75” of holding real estate to accommodate the increased blade size.

The Incursion renders a 0.125” thick 154CM stainless steel blade that is available in an all-new bayonet profile. This single edge blade style is the first of its kind in the HK arsenal, amplifying the Incursion’s bold and aggressive presence. The 3.9” blade is stone washed or finished with a black PVD coating, hand sharpened and honed to a keen edge.

A 6061-T6 anodized aluminum frame cases the blade with a sleek profile, providing minimum bulk during carry and without compromising overall strength. A double-action, ambidextrous trigger consistently deploys and retracts with impressive speed. For the all black model, Night Fision® has included a tritium infused trigger option for quick action in little to no light situations. The knife is completed with a carbide glass breaker, and a deep carry, reversible pocket clip. Available in matte black or grey frame configurations with an MSRP of \$289.95 – 329.95.

Heckler and Koch is a leading manufacturer of innovative military, law enforcement and civilian firearms. They have partnered with Hogue Knives to produce a full line of USA made precision cutting instruments. HK automatic knives are only for sale to legally permitted users through authorized dealers.

For more information, please call Hogue directly at 1-800-438-4747 or visit www.hkknives.com.
