

HOGUE INC. ANNOUNCES

COMPETITION SPORT HOLSTERS

Henderson, NV – Hogue Inc.® is pleased to reveal ARS Stage 1 Sport Holsters for competition shooters. Lead designer and competitive shooter, Eric Leach, boasts, “This holster is 100 percent geared toward providing an edge in competition. We have taken successful aspects from our carry line and evolved those features to increase competition speed and effectiveness. The end product is one of the most secure and operative holsters on the market today.”

The Sport ARS™ (Automatic Retention System) has been modified to accommodate two different locking modes. The closed mode utilizes the standard ARS thumb release method for added security. The open mode eliminates the thumb release activation and allows the holster to engage with the firearm through a friction hold. The firearm is still secure with a precision holster fitment and the reduced activation step facilitates a faster draw.

All Sport Holsters include three separate versatile attachments to cater to specific uses. The holsters come installed with an offset drop belt plate attachment. This attachment locates the firearm lower down the waist and away from the body, increasing speed and allowing more grasping room around the firearm. A QLS adapter is also included, specifically designed for 3-gun use where you can alternate your load out per course of fire. Finally, a carry holster belt plate is added for competitions that do not permit an offset belt plate attachment.

Hogue Sport Holsters are manufactured in the USA in Hogue family owned and operated facilities. Hogue Inc. supports local dealers and encourages customers to purchase Hogue products locally. For more information please call Hogue directly at 1-800-438-4747 or visit www.hogueinc.com.
