

Hogue buttstocks are manufactured to either MilSpec tolerances or a Commercial sized fit. Our patented OverMolded technology has resulted in buttstock models that snugly fit both sizes of buffer tubes, providing the best protection against rattle movement. Measure your buffer tube's diameter (see diagrams below) to determine your rifle's buffer tube size.

MilSpec Buffer Tube

MilSpec buffer tubes have a diameter of approx. 1.15", generally have a flat back and the threads rise slightly above the tube surface.

Commercial Buffer Tube

Commercial buffer tubes have a diameter of approx. 1.17", generally have a slanted back and the threads are even with the tube surface.
