Hogue Achieves Tight Lines with New Fillet Flex Knife

Hogue Hunting is releasing new fillet knife models to exceed the expectations of watermen and compliment their lineup of purpose-driven outdoor tools.

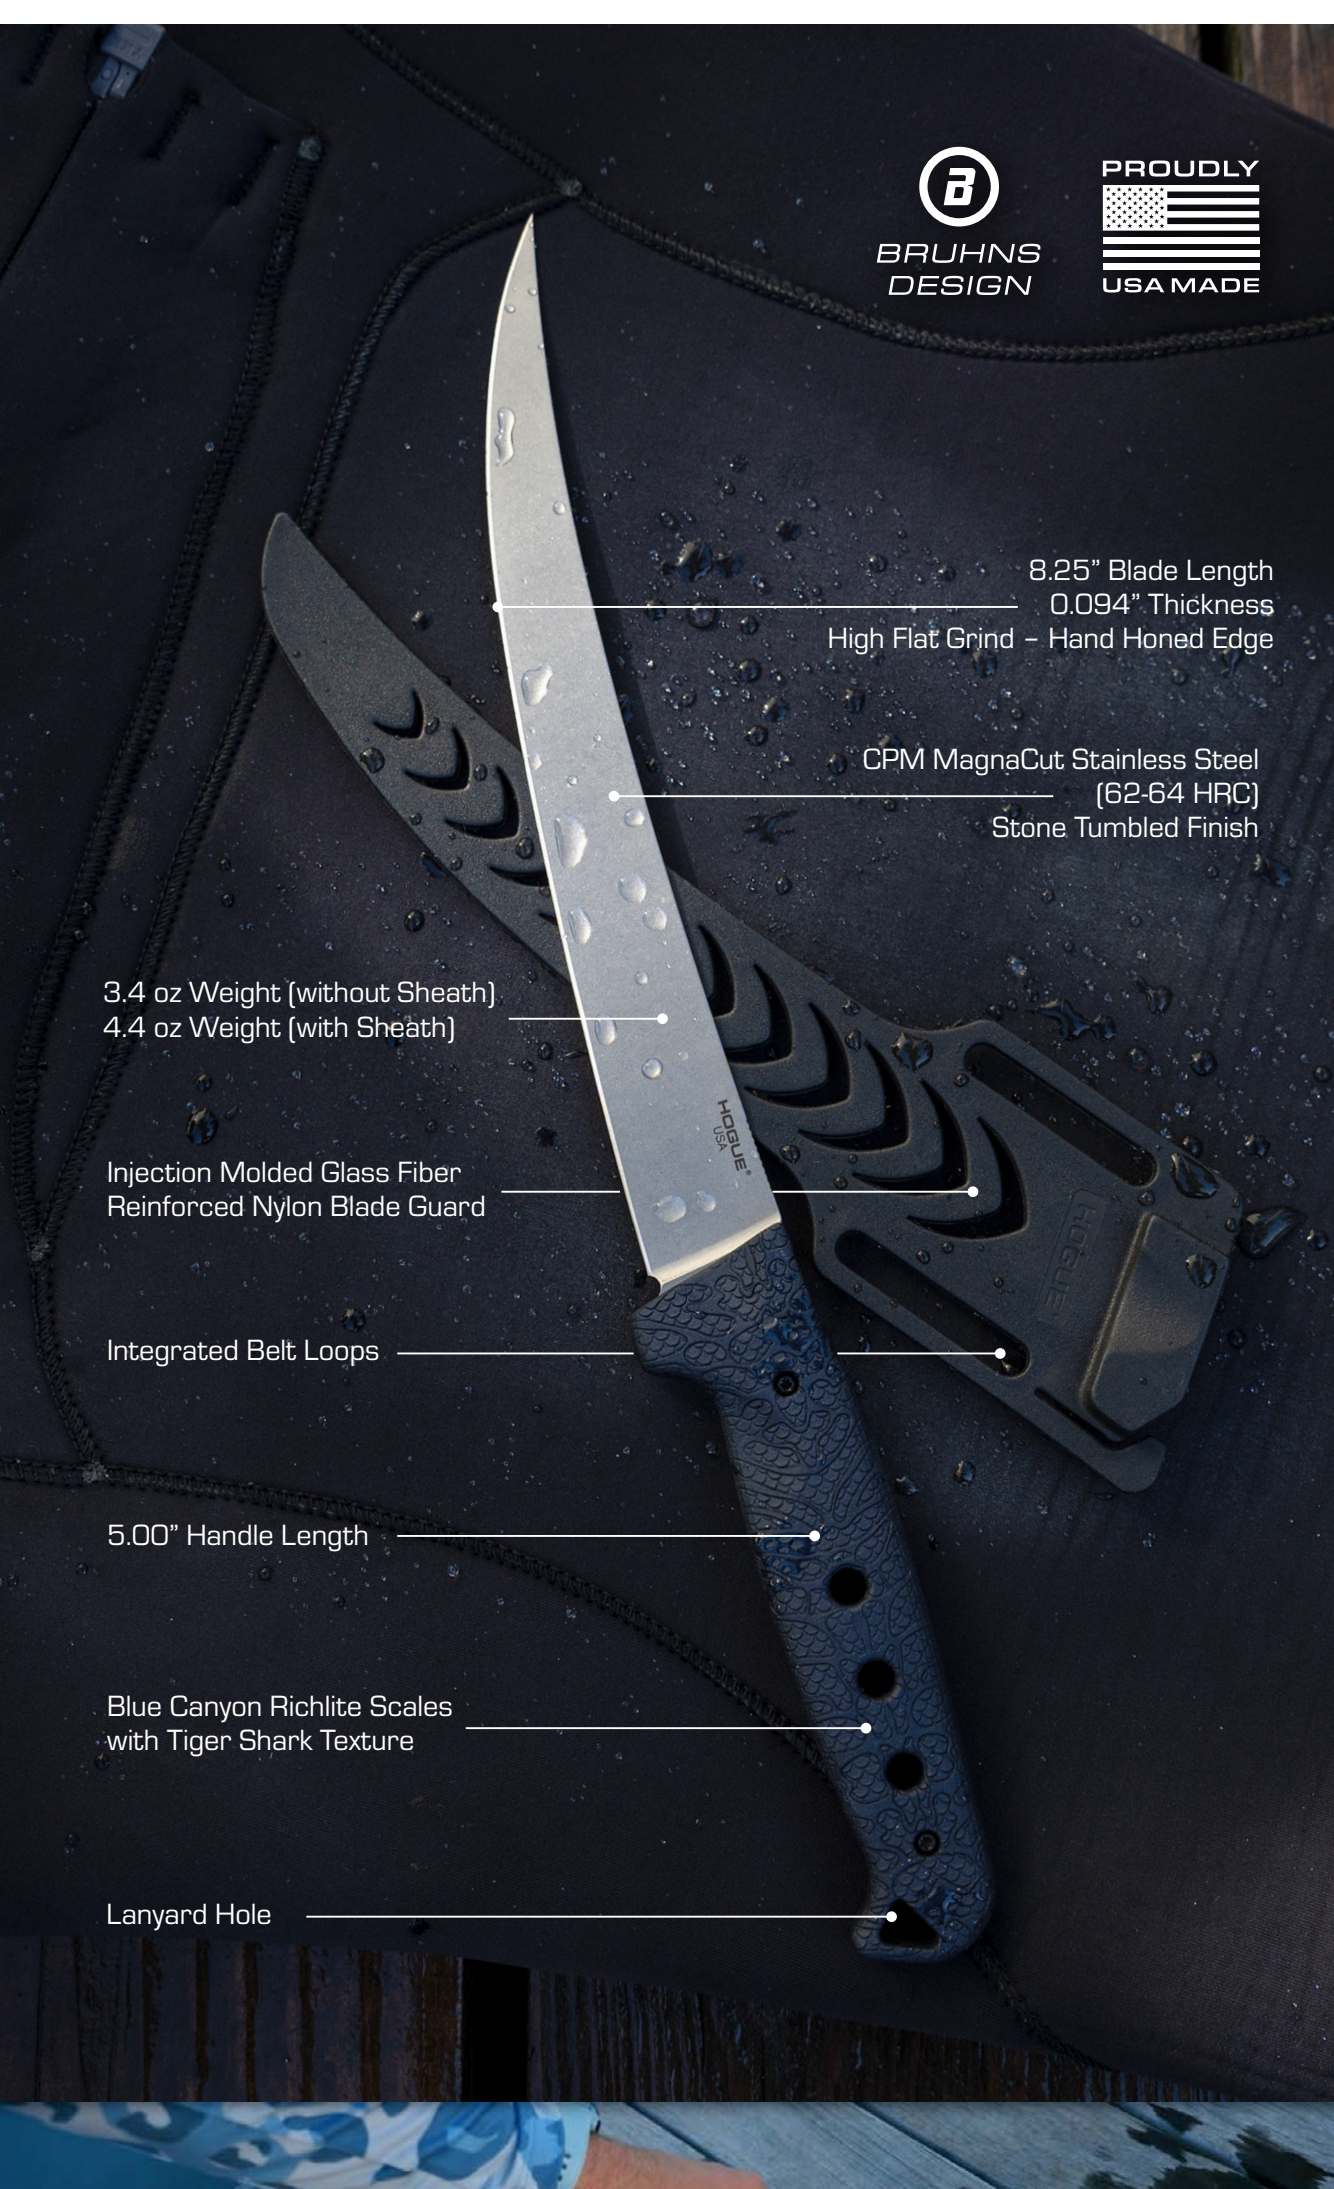

Henderson, NV – The team at Hogue continues to proliferate their mission of elevating the experience of outdoor pursuits, now turning their gaze from the land to the water. The all-new Fillet Flex was engineered and refined through countless hours of research and development in a wide range of fresh and saltwater environments, resulting in the most instrumental fillet knife to hit the blue economy.

Designed by Scott Bruhns of Bruhns Design, these specialized fillet knives are devised to efficiently transform all types of fish into flawless fillets. The exceedingly thin, curved blade profile allows the knife to glide freely through scales and skin, minimizing waste and maximizing flavor. The blade's remarkable flexibility allows for intricate slices and cuts along the unique contours of gill-bearing vertebrates.

The Fillet Flex is built from 0.094" thick CPM MagnaCut steel, cryogenically heat treated at 62-64 HRC for maximum edge retention, durability and impressive rust-resistant qualities. Blue Canyon Richlite scales, with texture emulating the scales of a tiger shark, provide the perfect combination of ergonomics and grip so the user can maintain efficiency, even in the wettest conditions. Each fillet knife kit also includes a glass fiber reinforced nylon blade guard with integrated belt loops, and a canvas zipper pouch for additional storability.

The new Fillet Flex will be released at the Safari Club International Show on February 18, 2026 at 8AM PT.

All Hogue Hunting products have been rigorously tested and proven by professional fishermen, hunters, outfitters, chefs, and taxidermists. Every Hogue knife is proudly made in the USA and backed by three generations of manufacturing expertise. For more information, please call Hogue directly at 1-800-438-4747 or visit www.hoguehunting.com.
