MYSTO

MAGNACUT + BROWNS POINT RICHLITE

FROM EARTH TO EXCELLENCE

Hogue Knives Buries the Competition with New Mysto Richlite EDC

Discover unparalleled craftsmanship and embrace the spirit of nature with Hogue's new Mysto "Earth" variation.

Henderson, NV – Hogue Knives is excited to announce the latest installment into the Mysto platform, excavated from the natural element earth.

For the outdoor enthusiast, this release incorporates Richlite, an environmentally responsible, resin-infused paper material with both impressive deflective and flexural strength, as commonly found in guitar fretboards. The new Mysto Earth variant specifically features a Browns Point Richlite frame, with a laser-engraved topographic pattern inspired from the geographic origin of Hogue Inc. on the Central Coast of California.

Designed by Scott Bruhns, this precision-built folder is crafted with the highest manufacturing standards while remaining competitively priced. A 3.4" CPM MagnaCut steel blade sports a Black Stonewash finish and boasts premium cutting power. Hogue's renowned ABLE Lock® mechanism offers quick blade deployment and rock-solid reliability. In addition, bronze anodized titanium thumb studs and backspacers cater to enthusiasts who enjoy an exceptional blend of aesthetics and durable functionality. At 2.5 oz, the Mysto maintains an extremely light weight without compromising strength, culminating in the ideal EDC. Each model also includes a Bruhns Design Earth Element PVC patch.

The new Mysto Element Earth variation will be fully released on October 10th, 2025 at 9AM PT.

Every Hogue knife is proudly made in the USA with domestic materials and is backed by three generations of manufacturing expertise. For more information, please call Hogue directly at 1-800-438-4747 or visit www.hogueknives.com.
