Hogue Knives Forges Ahead with New Mysto Richlite EDC

Discover unparalleled craftsmanship and embrace the spirit of nature with Hogue's new Mysto "Metal" variation.

Henderson, NV – Hogue Knives is excited to announce the latest installment into the Mysto platform, extracted from the natural element metal.

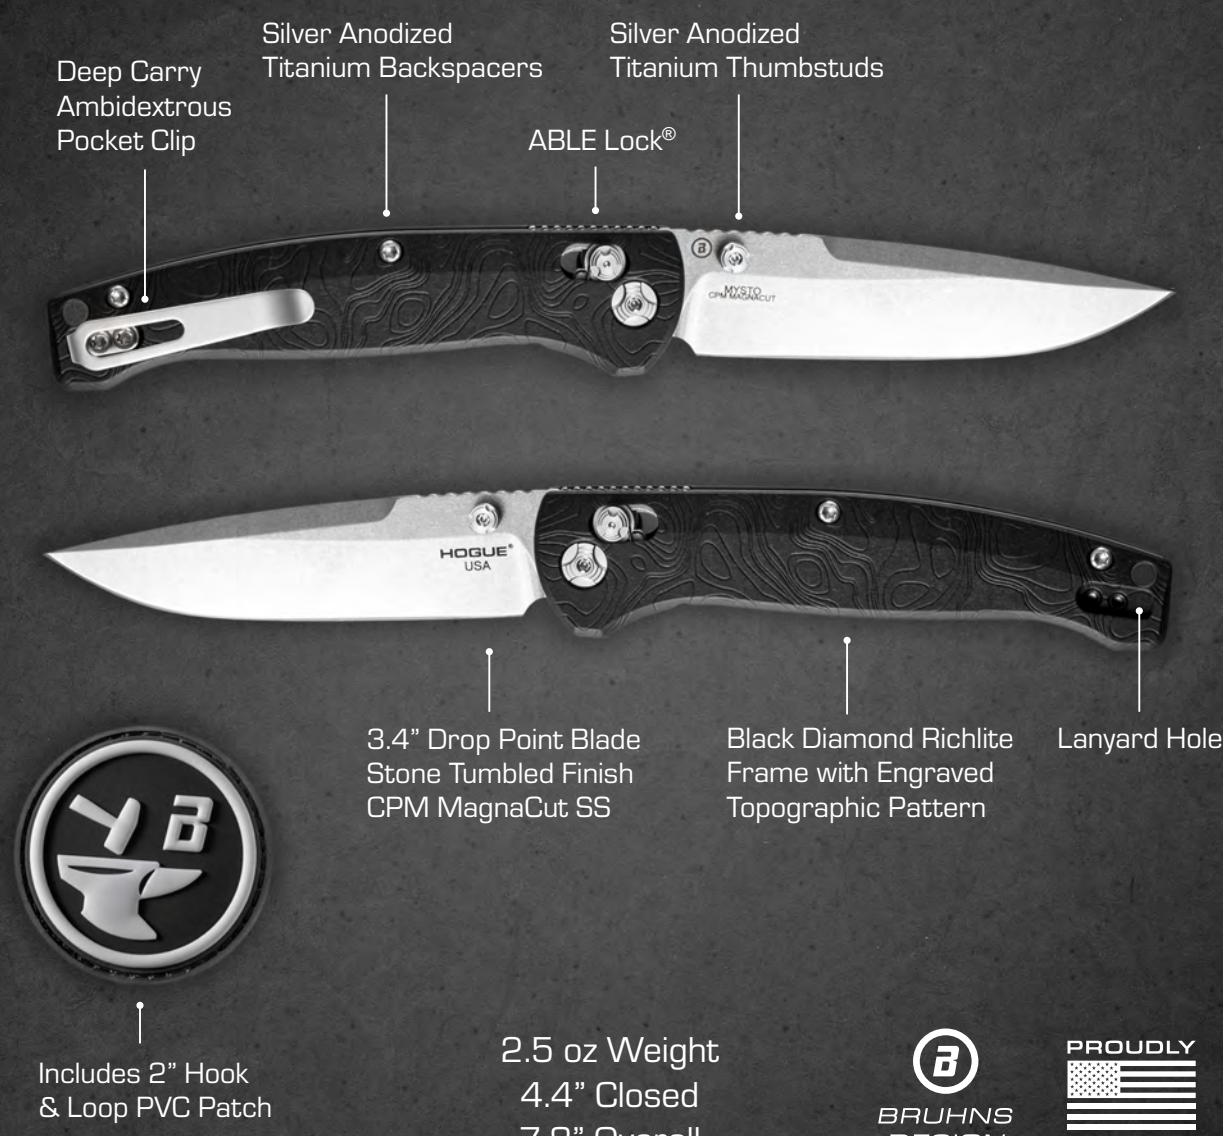

The new Metal release follows Hogue's subsequent series of Mysto Element models, including Water, Fire, and Wood, that incorporate unique Richlite-framed builds to encompass the energy of the respective element. This latest variant specifically features Black Diamond Richlite with a laser-engraved topographic pattern inspired from the geographic origin of Hogue Inc. on the Central Coast of California.

Designed by Scott Bruhns, this precision-built folder is crafted with the highest manufacturing standards while remaining competitively priced. A 3.4" CPM MagnaCut steel blade sports a stone tumbled finish and boasts premium cutting power. Hogue's renowned ABLE Lock® mechanism offers quick blade deployment and rock-solid reliability. In addition, silver anodized titanium thumb studs and backspacers cater to enthusiasts who enjoy an exceptional blend of aesthetics and durable functionality. At 2.5 oz, the Mysto maintains an extremely light weight without compromising strength, culminating in the ideal EDC. Each model also includes a Bruhns Design Metal Element PVC patch.

The new Mysto Element Metal variation will be fully released on September 8th, 2025 at 9AM PT.

Every Hogue knife is proudly made in the USA with domestic materials and is backed by three generations of manufacturing expertise. For more information, please call Hogue directly at 1-800-438-4747 or visit www.hogueknives.com.
